Patent Number	Kind	Lan	Pgs	Draw	Filing Notes
GB 2391649	A	EN	10	2	

Alerting Abstract GB A
NOVELTY - The new (**destination**) **server** (2) is set up to act as a gateway **transferring e-mail** connections to the **old (source) server** (1) by allocating the **old server's** Internet protocol (IP) address to the **new server**. The **old server** is allocated a **new** IP address, and users' **e-mail folders** are then **transferred** from the **old server** to the **new server** automatically at the next user log-in .
DESCRIPTION - INDEPENDENT CLAIMS are also included for ;

1. apparatus for transferring user's e-mail **accounts from** a source server **to a** destination server
2. stored software.

USE - For transferring user's e-mail accounts **from** one e-**mail system to** another.
ADVANTAGE - Simplifies the transfer of e-mail accounts between **systems** by **transferring mail files** automatically. Does not **disrupt the** e-mail service, require changes to the old server, or require users to **disclose or** change their passwords. Works with any Internet Standards-compliant messaging server as the source server
DESCRIPTION OF DRAWINGS - The drawing shows a block diagram of a destination server and source server set **up to** transfer **user** e-mail accounts between **them.**

1 old (source) server
2 new (destination) server

Patent Details

Patent Number	Kind	Lan	Pgs	Draw	Filing Notes
US 20030182288	A1	EN	20	12	

Alerting Abstract US A1
NOVELTY - The method involves connecting a replacement host storage system (25) to an **original host** storage system (19). The access control lists for directories and files from **original host** are retrieved and migrated to the replacement host. The **directories** and files are moved or renamed in the replacement host as on the **original** location in the **host** and the data migration terminates when all the files are transferred.
DESCRIPTION - An INDEPENDENT CLAIM is also included for a replacement host storage system for migrating data from **original host** storage system to replacement host storage system.
USE - Used for migrating data from **original host** storage system to replacement system in networks.
ADVANTAGE - The data migration database is stored in a persistent fashion, so any failure during the movement of data in the migration process does not necessitate restarting the operation from start. The **original host** if **removed** from the network the replacement host assumes the former's role allowing the users to access the host without any interruptions. The method also allows multiple client requests for acting on the data or files in network where data migration is occurring or has already occurred.
DESCRIPTION OF DRAWINGS - The drawing shows a block diagram illustrating the physical implementation of one system and method described for migrating data from one or more **original host** storage systems on a network.

Patent Details

Patent Number	Kind	Lan	Pgs	Draw	Filing Notes
US 20040003086	A1	EN	17	8	

Alerting Abstract US A1
NOVELTY - A group of directory objects of a directory server is identified to be transferred to another selected directory server which is capable of storing the identified objects. The location information in the table of selected server is updated to indicate the identified objects. The identified objects in the directory server from which the objects are transmitted, is deleted.
DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

3. computer readable recorded medium storing directory servers re-partitioning program; and
4. directory server re-partitioning frame-work.

USE - For re-partitioning directory servers in computer network which includes personal computer (PC), server computer, laptop devices, microprocessor system, microprocessor-based system, set-top box, programmable consumer electronics, network PCs, mini-computer, mainframe computer and distributed computing environment.
ADVANTAGE - The requested service is provided to the user without any interruption while transferring directory objects of one server to another. Thus, reliability of the system to enable the user to access during re-partitioning, is enhanced.
DESCRIPTION OF DRAWINGS - The figure shows the block diagram of the networked computer system facilitating directory servers re-partitioning process.

Alerting Abstract US A1
NOVELTY - Multiple configurations, files and directories that are executed on a Windows NT operating system (OS) file server, are transferred to a Linux OS server. A Linux-based human-computer interface control program that provides the human-machine interface similar to that in the NT OS is coded for ensuring integrity of the received data.
USE - For transferring configuration, files and directories between Windows NT and Linux operating systems.
ADVANTAGE - By ensuring integrity of the resources, the Windows OS server can administer the resources on the Linux server. Thus allows effective resource sharing between the OS servers.
DESCRIPTION OF DRAWINGS - The figure shows the diagrammatic illustration of the human-machine interface.

Alerting Abstract GB A

NOVELTY - A mail server (H) acts as a first directory synchronization (DS) server and the post office (A) acts as a mail DS requester to the DS server. Further mail servers are established which act as a second DS server (H2) and DS requester (H3), the mail from the post office is redirected to the second DS server, user entries are deleted from the first server and the post office becomes the DS requester for the second post office.

DESCRIPTION - An INDEPENDENT CLAIM is included for the computer network for mail server transfer.

USE - For migrating an electronic mail post office to a second server in an electronic mail network.

ADVANTAGE - Creates an easy way to migrate electronic mail post offices to a new mail server without the need to manually synchronize the directories.

DESCRIPTION OF DRAWINGS - The drawing shows a schematic view of a mail network and the flow of data in the network.

A First post office

H Mail server

H2 Second mail server

H3 Second DS requester

A local computer network implementation using Ethernet [M.S. Thesis]

LILJA, D J
Pages: 115P
Publication Date: 1982

Conference:
, United States

Record Type: Abstract
Language: English
Report No: AD-A124448; R-946; UILU-ENG-82-2212; Pagination 115P
Numbers: Contract: N00039-80-C-0556
Notes: HC A06/MF A01; Available from HC A06/MF A01
File Segment: Aerospace & High Technology

Abstract:
An Ethernet is used to connect an HP 3000 computer with a VAX 11 /780 computer to allow the transfer of files from one computer to the other. A user logs in on the VAX computers and uses a one-line command to send a file or to retrieve a file from the HP 3000 computer. Files are **transferred** between the **user's directory** on the VAX and either a specified directory or a public network directory on the HP 3000. The file transfer system uses a scheme of positive acknowledgement with retransmission to prevent transmission errors from corrupting the file.

Enter the NetWare impostor

Augmented Title: FPNW from Microsoft's File and Print Services for NetWare
Gillmor, Steve ;
Byte v. 21 (Feb. '96) p. 163
Document Type: Product Evaluation **ISSN:** 0360-5280 **Language:** English **Record Status:** Corrected or revised record

Abstract: Microsoft's File and Print Services for NetWare (FPNW) helps Windows NT servers access the majority

of NetWare environments. FPNW (estimated retail price $99.95) is a Windows NT Server 3.51 utility that makes an NT server operate like a NetWare 3.12 file and print server. This product, which is an enormous threat to NetWare's dominance, allows NetWare clients to use existing NetX or virtual-loadable-module client software to access NT server resources, including server applications. In addition, it includes an enhanced Migration Tool for NetWare that **transfers** NetWare **user** and group **accounts**, log-in scripts, files and directories, and equivalent security to the NT server.

Descriptors: NetWare (Computer programs); Network servers; Windows NT operating system ; Product evaluation ;
